PROJECT REPORT

Course: Object-Oriented Programming

Game Project: CROSSING ROAD

Theory Teacher: Dinh Ba Tien

Lab Teacher: Truong Phuoc Loc - Do Nguyen Kha

DECEMBER 08, 2021

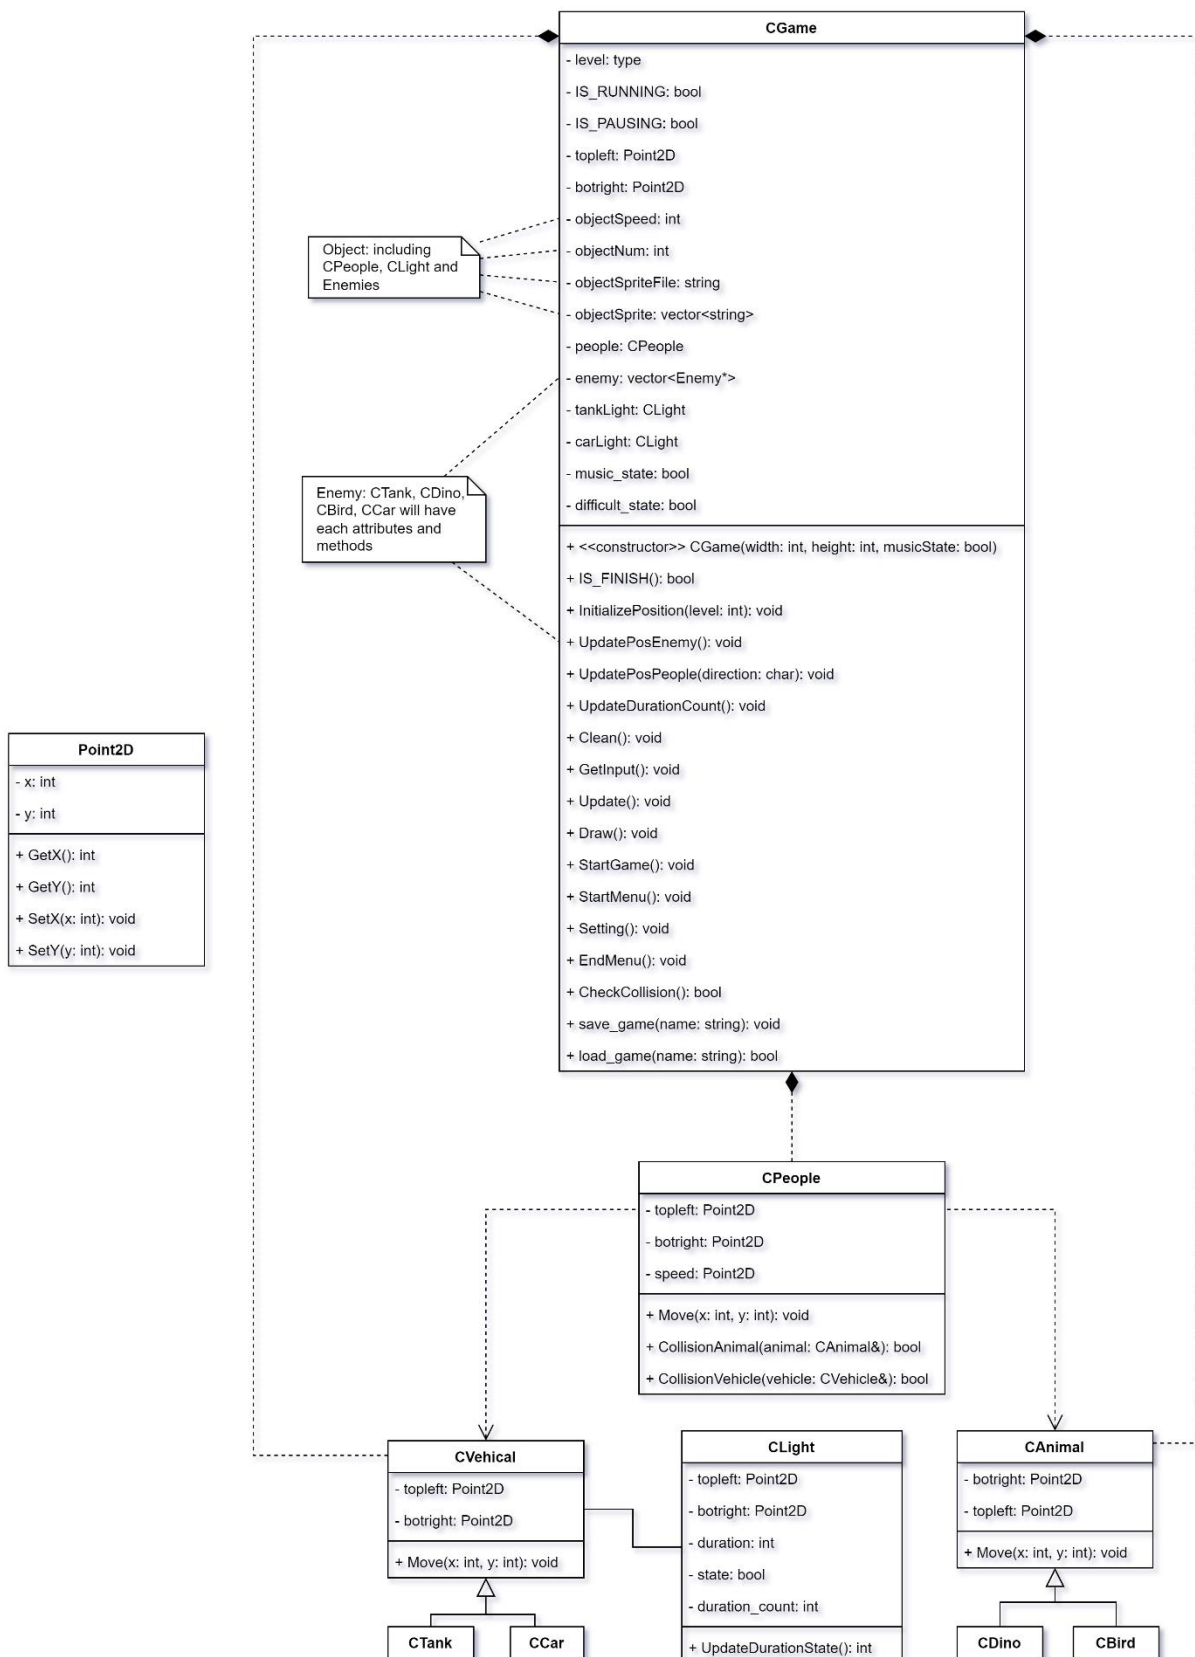

❖ **Members list:**

Full name	Student ID
Nguyen Vo Minh Tri	20127364
Le Hoang Khanh Nguyen	20127679
Bui Gia Huy	20127032
Nguyen Minh Quang	20127605

TABLE OF CONTENTS

1.	CLASS DIAGRAM OF THE WHOLE SYSTEM.....	3
2.	GAME MANUAL.....	4
3.	ASSIGNING TASKS TO TEAM MEMBERS.	8

1. Class Diagram of the whole system.

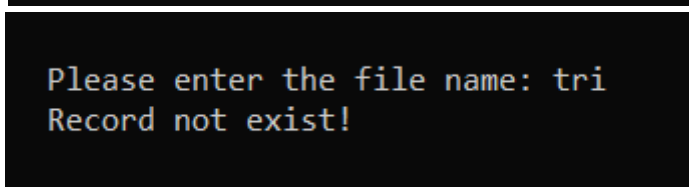

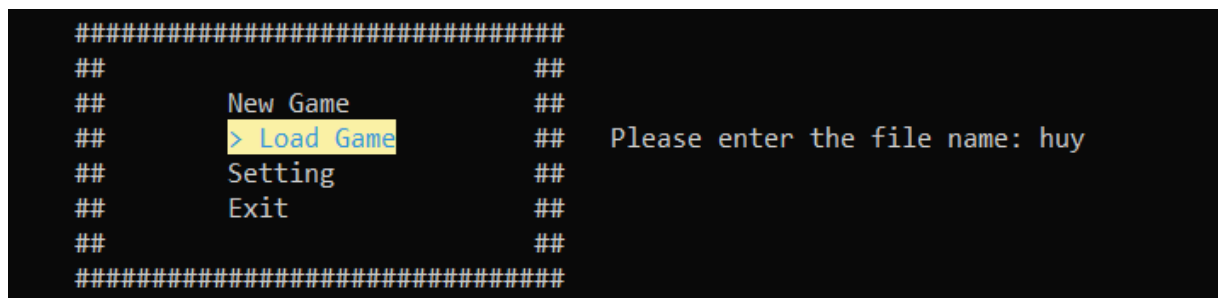

2. Game manual.

IMPORTANT: before opening the .exe file, be sure to put it in the same folder as the .wav and .txt files (so that the game can read data properly)

- ❖ When open, the game will ask you whether you want to start with sound. Pick your option with a/s then enter to select.

- ❖ Then you will be moved to the start menu. Here we have 4 options:
 - Start game: start afresh game from level 1.
 - Load game: open a record
 - The game will ask you to type in the name of the record you saved. If it successfully opens the record. There will be a loading screen, else there will be a message.

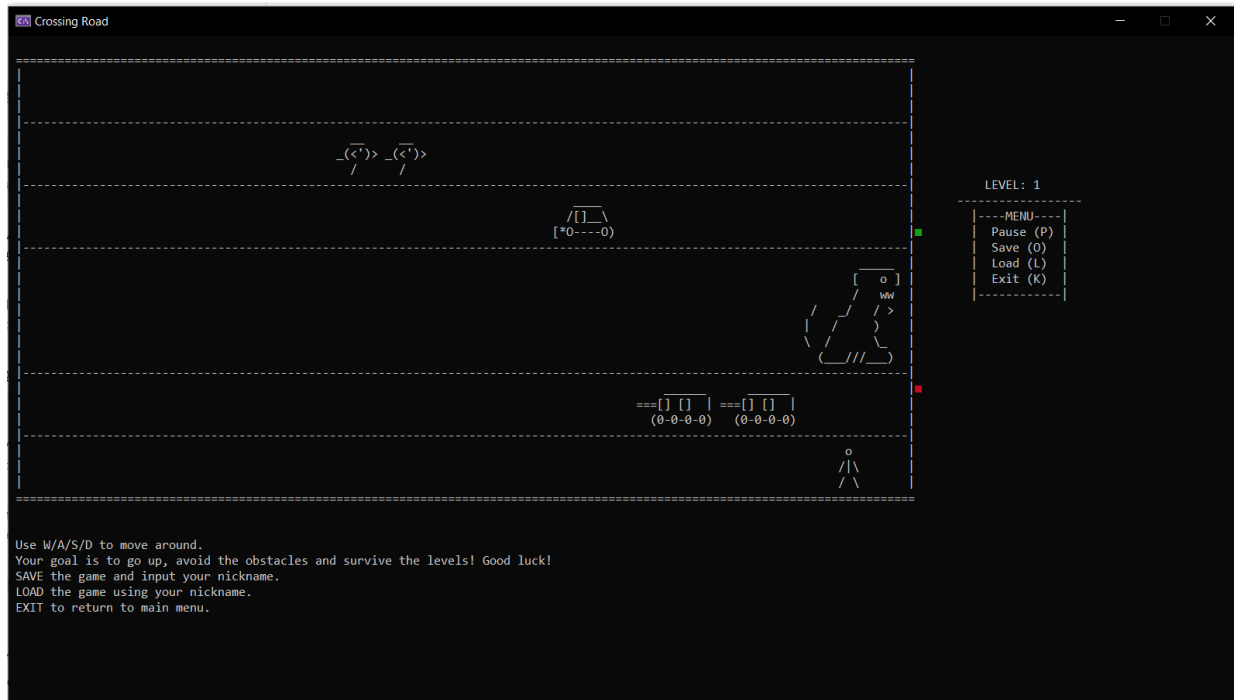

- Setting:
 - MODE: easy / hard, which will affect gameplay
 - SOUND: on / off, turn on / off sounds
 - BACK: back to start menu

- Exit: Leave the game

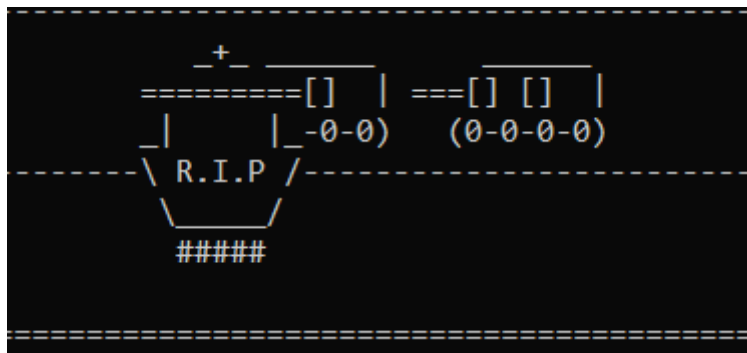

❖ While playing:

- Press w/a/s/d to move up/left/down/right.
- Try to dodge obstacles.
- Cars and tanks have traffic lights, you may want to use that to your advantage.
- If you get to the other side, you will level up and the game becomes harder.
- Press P to pause.
- Press O to save (the game will ask you to type in a name).
- Press L to load (the game will ask you to type in a name).
- Press K to go back to the start menu.

❖ If you hit an obstacle:

- There will be sound of thing you hit being play, your character will be replace with a graveyard. Then after a while, you will go to the end menu. There are 2 options:
 - Continue: play again (from level 1).
 - Main menu: back to start menu.

3. Assigning Tasks to Team Members.

Full name	MSSV	Tasks
Nguyễn Võ Minh Trí	20127364	<ul style="list-style-type: none"> + Code DrawBorder() to create playing menu structure + Code CheckCollision() to check for collision with enemies + Code drawTitle() to display title + Code StartMenu() to display start menu + Code Setting() for difficulty and music options + Code EndMenu() to display death menu + Code RIP() to display player death sprite + Code LoadingScreen () to display loading progress
Lê Hoàng Khanh Nguyễn	20127679	<ul style="list-style-type: none"> + Design sprites + Code SaveGame, LoadGame for .txt files + Implement threading + Implement CLight class and update related functions to make functional traffic lights + Code Draw function for sprites + Add sound effect for collision, stage success and background music
Bùi Gia Huy	20127032	<ul style="list-style-type: none"> + Implement CPeople, CAnimal, CVehicle classes + Code update position functions for enemies + Code SaveGame, LoadGame for binary files + Code Clean() for vector cleaning + Implement music option in StartWithSound() + Revise and compile code
Nguyễn Minh Quang	20127605	<ul style="list-style-type: none"> + Implement CCar, CTank, CBird, CDinosaur classes + Prepare initial values for CGame, set border + Set sprite files and sprite vectors + Initialize enemies' position and speed + Implement difficulty option in Setting() + Code StartGame() to initialize a game + Code GetInput() for playing menu + Code enemies' destructor + Code IS_FINISH() so game can finish a level and advance to the next + Revise and compile code
